Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.ornl.gov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/GENSCANW.html), and NetplantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TiGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan SE (Sean Eddy,
Eukaryota; Viridiplantae; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Rosidae; eurosids II; Brassicaceae; Arabidopsis.

In addition, we would like to thank the TIGR Bloinformatics Department, especially Lixin Zahou, Hanif Khalak, Michael E. Heaney, Lily Fu, Feng Liang, Jeremy Peterson, Michael Holmes, and Delwood Richardson for software and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Medical Center Dr., Rockville, MD 20850, USA
On Dec 17, 1999 this sequence version replaced gi:4895233.
The sequence and annotation of chromosome 2 were merged from those
of the individual clones on this chromosome after removing
overlaps. For detailed information, please see the TIGR web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (09-MAR-2000) The Institute for Genomic Research, 9712
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    We thank the CSHL/WashU/ABI consortium for sequencing BAC clones
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence and analysis of chromosome 2 of the plant Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This work was supported by the National Science Foundation,

Conterproject Information
Center project name: buildln5
Assembly program: XGAP4; version 4.5
Assembly program: XGAP4; version 4.5
Sequencing vector: plasmid: LOB752; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Consensus quality: 196518 bases at least Q40
Consensus quality: 196567 bases at least Q30
Consensus quality: 196587 bases at least Q20
Insert size: 196646; sum-of-contigs
Insert size: 196403; 4.3% error; agarose-fp
Quality coverage: 15.20x in Q20 bases; agarose-fp

consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
This 12.8 kb DNA sequence spans the region from -6.65 kb relative to the transcriptional start site to +6.15 (located in the third exon) of the murine endothelial growth factor (VEGF) receptor-2 gene of the murine endothelial growth factor (VEGF) receptor-2 gene of the murine endothelial growth factor (VEGF) receptor-2 gene of mouse strain 129/SvJ by screening a phage library of liver of mouse strain 129/SvJ by screening a phage library of liver genomic DNA in vector lambda FixII. Sequences within the 5'-flanking region of the gene, in combination with sequences located within the first intron, specifically and reproducibly target expression of heterologous DNA to angloblasts during early stages of vascular experiences of the first intron also function as an autonomous andothelium-specific enhancer when fused to autonomous endothelium-specific enhancer, This Fix-1 intron enhancer contains several potential binding sites for transcription factors of the Ets and GATA families. The invention provides a contained recombinant DNA (I) comprising at least one regulatory sequence from an intron of the Fix-1 gene, or its homologue, to control expression in endothelial cells, in vivo, linked to (b) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA containing heterologous sequence controlled by endothelial cell specific regulator - from the Flk-1 gene, used to treat, prevent or diagnose vascular disease, tumours, also to screen for transcriptional regulators

(I) is used to produce transgenic animals, and these, or transformed cells, are used to identify agents (A), potential pharmaceuticals, that suppress, activate or enhance transcription of genes in endothelial cells. (I), vectors and (A) are used to direct or prevent (for antisense sequences) expression of genes specifically in endothelial cells, e.g. for treating angiogenesis, cancer, diabetic retinopathy, rheumatoid arthritis etc., and in wound healing, particularly for treating vascular clisease (particularly proliferation of smooth muscle cells, specifically atherosclerosis), tumours and neuronal disorders. They may also be used to induce vascular disease in the transgenic animals or diagnostically, particularly for studying (mal)function, interactions and unregulated expression of endothelial products. (I) provide specific modulation of gene expression in endothelial

Neisseria meningitidis.

WO200022430-A2.

N. meningitidis partial DNA sequence gnm_21 SEQ ID NO:21.

```
invention relates to a method of detecting and characterising a stealth virus by reacting a sample suspected of containing a stealth virus with a probe from a known stealth virus and sequencing the resultant isolated nuclectide. The method comprises the steps of: (a) isolating DNA or RNA from a sample suspected of containing a stealth virus, e.g. a culture of cells showing a viral cytopethic effect; (b) testing the reactivity of the isolated DNA or RNA with a molecular probe that contains at least 18 or more contiguous nucleotides identical to sequence previously cr more contiguous nucleotides identical to sequence previously contained from a stealth virus; and, optionally (c) sequencing the isolated DNA or RNA molecules that react with the probe. The method is used to detect stealth virus in a biological product, food or in the inhibitory or stimulatory effects on stealth virus replication and to determine capacity of the virus to recombine with and potentially alter the nucleic acid sequences of a cell or bacterium.
                                   b "this nucleotide is represented as a * in the specification, and is included to maintain the base numbering given in the specification"
base numbering given in the specification"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a Stealth virus nucleic acid clone. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2274 BP; 706 A; 375 C; 266 G; 769 T; 158 other;

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. A81453 to A82414 represent proteins from Neisseria genomic sequences. A81453 to A812414 represent corresponding by Neisseria meningitidis genomic DNA sequences and their corresponding proteins; A81254 to A81259 and A81304 to A81321 corresponding proteins; A81254 to A81259 and A81304 to A81321 corresponding proteins; A81254 to A81259 and A81304 to A81321 corresponding proteins; A81254 to A81259 and A81304 to A81321 corresponding proteins; A81254 to A81259 and A81304 to A81321 corresponding their corresponding proteins; A81452 represent Neisseria meningitidis DNA sequences; and A81322 to A81452 represent Neisseria meningitidis MenB composition. The nucleic acid sequences, protein sequences, and antibodies against them, can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified correspondences from the bacterium will also facilitate production of sequences from the bacterium will also facilitate production of correspondences from the bacterium will also facilitate production of cological probes, particularly organism specific probes. Attempts to antigen tolerance Multivalent vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have failed mainly due to antigen tolerance may provide an opportunity to identify expected or surface sequences may provide an opportunity to identify expected or surface exposed proteins that may be present expected or surface exposed proteins that may be presented or surface exposed proteins that may be presented.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immune system and which are not antigenically variable or at least more conserved than other more variable regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     82542 tttgtgcatacctgtggattgtttttcatgaagaatagtttttgtggacagtttgcttgt 82601

Neisseria meningitidis B full length genome sequence and open reading frames are used to detect, treat and prevent Neisserial infections -

Claim 7; Appendix A; 692pp; English.

The present invention describes the full length genome of Neisseria menigitidis B (NMB). The sequences in F21544 and F21607 to F21613 represent fragments of the NMB genomic sequence, as the sequence was too long to go in a record on its own it was split into 8 sequences which overlap each other at the beginning and end of each sequence by which overlap each other at the beginning and end of each sequence by F21607, the last 49980 bp of F21544 is repeated at the beginning of F21607, the last 49980 bp of F21507 are repeated at the beginning of F21608, and so on). F21545 to F21560 represent PCR primers which are used in the exemplification of the present invention. The NMB genome and fragments from it have antibacterial activity, and can be used in vaccines and gene therapy. Neisserial nucleic acids, proteins and/or treating or preventing infection due to Neisserial bacteria or as a diagnostic regent of the presence of Neisserial bacteria or of antibodies raised to Neisserial bacteria. Computers, computer memory, computer storage medium or computer databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are more effective in vaccines than the outer membrane proteins currently used.

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. A81453 to A82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences; A81260 to A81303 and B25620 to B25663 represent Neisseria DNA sequences and their corresponding proteins; A81254 to A81259 and A81304 to A81321 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences; and A81322 to A81452 represent Neisseria meningitidis MenB polynucieotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proteins could be components of vaccines against Meningococcus B; against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              all serotypes; and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify

```

This invention describes novel isolated human genes and the secreted

```
Specific uses are described for each of the 101 polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and fetal deficiencies, blood disorders, leukemias, diseases of the immune system, autoimmune diseases, hepatic and renal disease, lymphomas, inflammation, allergies, Alzheimer's and cognitive disorders, schizophrenia, prostate disease, skeletal or cradic muscle disorders, pulmonary disorders, transplant rejection, disorders involving osteoclasts such as osteoporosis, arthritis or malignancies, diseastive/endocrine disorders, infections and AIDS. The human secreted proteins of the invention are represented in X37451-X37552.
                             preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides.
proteins they encode. The products of the invention are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1222 BP; 402 A; 207 C; 243 G; 367 T; 3 other;

represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antichastic; antichastic; inmunosuppressant; immunostimulant; cardiant; thrombolytic; coaquiant; vasotropic; antichabetic; hypotensive; cardiant; thrombolytic; osteopatic; antichabetic; hypotensive; cardiant; thrombolytic; antichabetic; antichabetic; hypotensive; cardiant; thrombolytical; antithabetic; noredisposition to, or preventing or treating pathological conditions associated with an ORRY-associated disorder. The nucleic acids can be used to express ORRY proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglolability anticining anticining cartilage anaemia, burns, walling decoming cartilage anaemia, burns, anticininamia ant
                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            enhance coagulation; to inhibit thrombosis; and as a contraceptive

                                                                                                                                                                                                                                                           This sequence represents a E. coli strain J96 contig containing pathogenicity island (PAI) sequences, and represents a nucleic acid molecule of the invention. PAIs are large fragments of DNA which comprise pathogenicity determinants. The sequences of the invention are taken from PAI IV and PAI V. PAI IV is located at approximately 64 min (near phev) approximately 94 min (at phex) on the E. coli chromosome and is greater than 170 kb. PAI V is located at approximately 94 min (at phex) on the E. coli chromosome and is approximately 160 kb in size. Antibodies specific to the proteins encoded by the PAI open reading frames of the invention can be used in kits to a protective immune response in an animal to the uropathogenic E. coli strain J96.

                                                                                                                                                The present sequence encodes Escherichia coli virulence proteins
The specification describes virulence proteins which are encoded
by an operon including tath, tath, tatc, tatk, mdog, creC, recg, yggN,
eckl, iroD, iroC, iroE, mtd2 or msl-16 genes obtained from Escherichia
coli KI. The virulence proteins and polynucleotides, and their vaccines
are useful for screening potential drugs, for the detection of virulence,
and for treating or preventing conditions associated with infection by
                                                                                  Peptide encoded by an operon including genes from Escherichia coli for screening potential drugs, detecting virulence and treating conditions associated with infection by a Gram negative bacterium -

This invention describes a novel nucleic acid (NI) encoding a Chlamydia pneumoniae protein (PI), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, card is useful for diagnostic and analytical methods, such as, chybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizes under stringent conditions to NI; (3) an expression cassette comprising fragment of NI; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to NI; (3) an expression of a transcriptional initiation region functional in an expression host, and a transcriptional termination region functional in an expression host, and a cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a PI comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other proteins; (6) a purified polypeptide composition comprising at least 50 expression and a part of the protein free of other proteins; (6) a purified polypeptide composition comprising at least 50 expression and isolating antibody binding specifically to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; secreted protein; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; creebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungloide; neoplasm; opthalmalogical; autoimmune disease; rheumatoid arthritis; angiogenesis; phyperproliferative disorder; cardiovascular disorder; infection; crebrovascular disorder; nervous system disorder; infection; wound healing; chemotaxis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         31730 actgretttacgatgaagacagetttteactettgetattettggttttgttggtcttt 31789

The polynucleotide sequences given in C74223-C74279 encode the human secreted proteins represented in B39179-B39226. Sequences B39227-B39308 are alternative proteins encoded by the genes, and also protein sequences with which they share homology. The proteins have activities based on the tissues and cells in which they are expressed Examples of activities ancinclude: immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antiarthriticmal; virucide; fungicide; and opthalmalogical. The human secreted proteins, polynucleotides, antiartagonists and agonists of the invention may be useful in the treatment, prevention, and/or diagnosis of various disease, disorders and conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such as autoimmune diseases e.g. rheumatoid arthritis, they preproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. carbral ischaemia, angiogenesis, nervous system disorders e.g. carbral ischaemia, infections caused by bacteria, viruses and fungi and cular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to regenerate tissues, maintain organs before transplantation, in chemotaxis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and as a food additive or preservative e.g. to increase storage capabilities. Sequences C74214-C74222 and B39178 are used during the isolation and characterisation of the genes of the invention.
                                                                                                                                                                                                                                                                 Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition \,

that are highly expressed in utarian incited (CDM) sequences (A), and anticancer and cytostatic activity. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. 241981-242121 represent EST fragments derived from a human endometrium tumour CDM, library which encode the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes novel human nucleic acid (cDNA) sequences (A),
                                                                                                                                                                                                                                      Dahl E;
                                                                                                                                                                                                                                                                                                                                         New nucleic acid sequences expressed in uterine cancer tissues, and derived polypeptides, for treatment of uterine and endometrial cancer and identification of therapeutic agents
                                                                                                                                                                                                                                    Schmitt A, Pilarsky C,

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high modar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gil4732114) (pplART29072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XL10-Gold (Stratagene) cells and selected for amplcillin resistance."

/note="wector: pBACIndigo: Site_1: ECORI; Site_2: ECORI; Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly opulated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Barle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using ECORI as the cloning enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximaley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu):"

XhoI; CDNA was prepared from polyA+ enriched RNA from
cotyledons and primary leaves harvested 5 and 8 days after
inoculation with Colletotrichum trifoli: The CDNA was
directionally ligated into the Uni-ZAP XR vector from
Stratagene and packaged using Giapaex III Gold packaging
extracts. Plasmids containing CDNA inserts were excised
from the recombinant lambda-ZAP phage using Ex-Assist
helper phage and propagated in XLOLR cells. Note: EST may
be of fungal origin."
